I am a Full Stack Software Engineer with a keen eye for detail and a robust problem-solving approach, honed through extensive industry experience and personal projects. Passion for automating manual business processes, significantly reducing time spent on tasks and cutting costs. Outside of my software career, I am a meditation advocate and have helped tens of thousands of people go through meditation programs online.

PROFESSIONAL EXPERIENCE

Riki Technologies

Remote

Full Stack Software Engineer & Co-Founder

July 2023 – Present

- Developed a Cyber Quote Generator tool to enhance the underwriting process for cybersecurity insurance companies, facilitating efficient collection and analysis of business information for quote generation.
- Managed a team of 3 developers in a fast-paced startup environment, overseeing the full development lifecycle, including task delegation via Jira, conducting thorough code reviews, and ensuring timely delivery of high-quality software solutions.
- Implemented robust user authentication using Auth0 (powered by Okta), incorporating multiple access tokens for granular user role management and secure API interaction
- Engineered the front end with Next.js and React, deploying via Heroku for streamlined delivery and scalability
- Managed application state effectively with Redux Toolkit, employing various slices for optimized state management
- Created a sleek user interface with Material-UI, prioritizing intuitive design and user experience
- Built a stable and maintainable backend with Ruby on Rails, also deployed through Heroku for cohesive development and production environments
- Ensured clean code in the controllers and efficient data serialization using the JSON API gem, promoting code readability and maintainability

Blue Apron /Fresh Realm

Remote

Full Stack Software Engineer

March 2022 – January 2024

- Engineered comprehensive features for packline management optimizing logistics and delivery
- Played a key role in sprint planning and grooming sessions, aiding in the prioritization and estimation of work (agile)
- Provided critical production support as an on-call Full Stack Software Engineer, resolving production issues
- Migration of legacy Ember applications to React, modernizing the user interface and improving application
- Developed and maintained robust backend endpoints and Sidekiq jobs, contributing to a resilient infrastructure
- Designed and improved Active Admin interfaces and React components, for internal teams
- Authored extensive unit tests for all new code, front and back end, using Jest for JavaScript and RSpec for Ruby

Bank of America Merrill Lynch

New York, NY

Senior Analyst, Markets | Product & Data Analytics

May 2017 - February 2021

- Led multiple projects to enhance internal stock applications, working with engineering teams to improve workflows and system functionality
- Managed end-to-end product enhancements, including feature prioritization, implementation, and post-launch analysis
- Integrated internal tools with new division-wide software, ensuring smooth adoption and usability across teams
